PATENT OFFICE

## COMMISSIONER'S ANNUAL REPORT, FISCAL YEAR 1965

Fiscal year 1965 marked the 175th Anniversary of the American Patent System. This occasion was commemorated with a series of formal meetings with leaders of industry, labor, government, the scientific and academic communities, and members of the patent profession to discuss the patent system and possible solutions to the problems confronting the Patent Office. Another appropriate gesture toward commemorating the 175th Anniversary of the American Patent System was the record setting 102,000 application disposals, an increase of 35 percent in productivity over the preceding 2 years. This output reduced the backlog slightly in spite of a continued upward trend in the number of applications received, continued examiner turnover, and essentially the same size staff. New procedures streamlining the examination of patent applications were initiated by Commissioner Brenner as were studies and cost comparisons of several different types of patent examining systems. An Office of International Patent and Trademark Affairs was established in order to consolidate and increase efforts towards international cooperation re patents and trademarks. At the end of the fiscal year passage of new fee legislation was imminent. In addition, the President established a Commission to study the American Patent System.

Two new Assistant Commissioners, Messrs. Richard A. Wahl and Gerald D. O'Brien were appointed to succeed Assistant Commissioners Fay and Glaser, both of whom resigned.

Issued in this period were the 200,000th Design Patent and 2,500th Plant Patent.

Senate action on the new Patent Office building was deferred pending further study as to the most appropriate location for the facility.

### PRODUCTIVITY

#### *Economy, Efficiency, and Effectiveness Program*

The "3-E" policies of economy, efficiency, and effectiveness were initiated and applied in fiscal year 1965. Under them the Patent Office goal is to achieve up-to-date status of work by 1970 and to render better service to the public. Typical examples of the efforts of the Patent Office along this line are (1) to increase productivity of the Examining Corps under the Streamlined Examining Procedure, (2) to reduce class training time of the

Patent Office Academy, (3) to reduce clerical tasks in the Trademark Examining Operation, and (4) to revise specifications for printed reproduction of patents. The above projects resulted in increased output and significant cost savings to the Patent Office during fiscal year 1965.

### **Examining Corps**

For fiscal year 1965, a record 102,000 patent applications were disposed of as compared with approximately 76,000 during each of the 2 preceding fiscal years. This represents a 35 percent increase in productivity. As a consequence, the backlog of roughly 220,000 applications was reduced approximately 13,000. The period of pendency of patent applications stayed about the same in fiscal year 1965, averaging slightly over 3 years.

### **Board of Patent Appeals**

The number of appeals received by the Board of Appeals in fiscal year 1965 was 24,174, including 589 petitions for reconsideration, as compared with 11,322 appeals received in fiscal year 1964. As of June 30, 1965, there were 10,768 appeals on hand including 6,187 awaiting appellants' brief, 2,787 awaiting examiner's answer and 1,794 awaiting hearing decision by the Board.

### **Board of Patent Interferences**

At the end of the fiscal year there were 1,923 interferences pending in the Board of Interferences as compared to 2,096 at the end of fiscal year 1964. The number of interferences declared during the fiscal year 1965 was 63 or 336 less than the number (987) for fiscal year 1964. Interferences disposed of in fiscal year 1965 totaled 824, which is 63 more than were disposed of in the previous fiscal year.

### **Trademark Examining Operation**

Trademark applications received in fiscal year 1965 totaled 26,657, an increase of 1,083 over the previous year. Disposals for the period totaled 25,507, as compared to 26,634 in fiscal year 1964, for an average of 7 disposals per examiner. The backlog, including applications in preexamination status, increased from 15,462 to 16,698.

### **Trademark Trial and Appeal Board**

The Trademark Trial and Appeal Board disposed of 1,401 adversary proceedings during fiscal year 1965 as compared to 1,541 in fiscal year 1964. There were pending as of June 30, 1965, 1,564 adversary proceedings and 103 ex parte appeals.

### **Office of Patent Classification**

Six (6) new classes were established during fiscal year 1965 and eight (8) were abolished. The new classes contained 50,085 original patents, 57,575 cross references and 66,399 foreign patents classified in 1,346 sub-

classes. In addition, 343 new subclasses containing 11,541 original patents, 14,999 cross references and 7,245 foreign patents were established in existing classes. Almost 11,000 original patents were transferred to existing subclasses while over 72,000 original patents were reclassified during fiscal year 1965. At the end of the year about 395,000 original patents in 38 classes and parts of classes were being reclassified.

### **Scientific Library**

During fiscal year 1965, the number of volumes cataloged (10,780), the number of periodicals routed (56,866), the number of foreign patents received (284,840), and prepared for examiner's use (204,904), the number of foreign patents studied in consultation with translators (21,132), the number of photocopies ordered (234,005), the number of reference inquiries (20,874) have all increased significantly over the previous fiscal year. Methods for sending foreign specifications which cite U.S. application as priority to the appropriate examiner were proposed.

### **General Services**

Fiscal year 1965 was a year in which 89,234 new applications (excluding design applications) were filed. This represented an increase of nearly 1,400 over fiscal year 1964. In addition, 7,500,000 photocopies of Patent Office records were prepared on request and 11,459,179 copies of patents and trademarks were sold and distributed throughout the world. Each of these outputs were more than one-half million over those of the previous year.

## **PROGRAMS AND OPERATIONS**

### **Examining Corps**

As mentioned above, the streamlined examining procedures (Second Action Final Program)<sup>1</sup> initiated by Commissioner Brenner during fiscal year 1965 more than attained the established objective of 100,000 disposals with no discernible reduction in quality of examination of patents issued. While this increased productivity reduced the backlog, the period of pendency remained substantially the same, or slightly over three (3) years.

Since the Commissioner's objective is to reduce the period of pendency of patent applications to 1½ years, concentrated effort is still necessary to maintain a high level of production. Therefore the streamlined examining procedures will be continued along with a new procedure for making a limited number of cases "special" for immediate action. Under the new procedure adopted July 26, 1965, in accordance with a Commissioner's notice, the applicant or his attorney must limit the number of claims to 10, cite all pertinent art that his search revealed as reading on his claimed invention, and meet other requisites of the notice. Applications also may qualify for

---

<sup>1</sup> Discussed in fiscal year 1964 annual report.

special status under the long standing provisions of Rule 102 of the Rules of Practice where petitions may be filed on the grounds of health, infringement, manufacture, and so forth.

In addition to the foregoing, some reorganization, and staff changes were initiated to facilitate the achievement of the Corps production goal. Staffing plans were made to strengthen the Chemical and Electrical Operations by shifting 50 examiners from Mechanical Operations to these Operations in an effort to overcome the large caseload in each Operation. This shift was to be accomplished primarily through employee recruitment and the possible utilization of skills possessed by employees in the other Operations. A study of the skill requirements, other than strictly Chemical disciplines, which could be utilized in the Chemical Operation was conducted. At the end of fiscal year 1965 the Chemical and Electrical Operations had gained 47 examiners by these means. Further staffing shifts are planned until workloads and work force are in proper alignment to achieve Office goals. Closely related to the above staffing changes were the organizational changes of creating 108 Art Units in the Groups and the transferring of the clerical force from the control of the Directors to the respective Group Managers. Each of the newly created Art Units are staffed with up to 10 examiners under the direction of a Supervisory Primary Examiner who is responsible not only for final decisions in individual applications but also for assuring that the pattern of such decisions complies with policy and program requirements set by higher authority. In connection with program management, each Group Manager has been assigned a standard caseload per disposal for his Group taking into account complexity of art and experience level of the examiner staff. This standard was developed through joint efforts of the Superintendent, the Directors, and the Group Managers.

New management information systems have been devised which provide data in terms of hours for each of the major examining functions performed leading to disposals. Data is being derived from the reporting system of the types of first action and final rejections and for case history, all of which will provide valuable planning and staffing data for future operations.

Another program to expedite the examining process is the supplying of cited references automatically to applicants and examiners. Such a program facilitates subsequent examiner actions on the application by eliminating the necessity for retrieving a previously cited reference. The integrity of the examiner search file will also improve since references would not be removed from the search file after their initial citation by the examiner. This procedure enables the patent practitioner to begin work immediately on his response to an Office action and may encourage earlier responses contributing to the disposal objective of the Patent Office.

Directly related to the foregoing is the plan for initiating a Systems Analysis Study of the Patent Office. Arrangements are being made with the

Institute of Applied Technology, U.S. National Bureau of Standards to direct such a study during fiscal year 1966. The purpose of this systems analysis study is to develop full descriptions of the examination processes and quantitative data on the application flow with both the numbers involved in each movement and the time consumed in the transitions observed. With this data it will be possible to construct statistical models for predicting backlog, disposals, pendency time, and waiting time both for actions and responses. Such data will be of considerable value to management in the decision making process.

Studies, more in the nature of long range planning, have been initiated also. Representative of these are:

(a) A joint study has been initiated with the patent bar to consider changes in the Rules of Practice relating to the writing of patent specifications and claims, particularly the length of patent specifications and the number and nature of patent claims. If appropriate changes can be made, it will result in saving of time and money to the Patent Office, patent applicants, and the patent bar in the preparation, prosecution, and examination, of patent applications in the U.S. Patent Office.

(b) A comparative cost study was initiated of four patent examining systems: (1) an efficient full examination system of the type practiced in the United States, (2) a deferred examining system of the type adopted by the Netherlands, (3) a deferred examining system of the type being considered in the European Economic Community, and (4) a combination system encompassing a full and/or deferred examination depending on the desire of the applicant. The results of this study will be presented to the Presidential Commission.,

### ***Presidential Commission***

The President's Commission on the Patent System, established by Executive Order 11215, published in the Federal Register of April 10, 1965 (30 F.R. 4661), has been charged with making the first basic study of the system since its creation in its present form in 1836. Basically the Commission will attempt to determine (1) whether the present patent system is fulfilling the national and international needs, (2) the nature of required improvements and changes, and (3) the nature of any legislation required to strengthen the system. The Commission is directed to make a preliminary report within a year and its final report and recommendations within 18 months. Chairman of the Commission is Dr. Harry Hunt Ransom, Chancellor of the University of Texas. The other members of the Commission are John Bardeen, University of Illinois; James Birkenstock, Vice President, Commercial Development, I.B.M.; Howard W. Clement, Patent Attorney and Chairman of Board of Trustees, University of Illinois; Howard Nason, President Monsanto Research Corporation; Sidney Newman, Patent Attorney; Bernard Oliver, Vice President, Research and Development, Hewlett-

Packard Corporation; Simon H. Rifkind, Attorney; Horton G. Stever, President, Carnegie Institute of Technology; Charles Thornton, President, Litton Industries; Hon. John T. Connor, Secretary of Commerce—Designee, Hon. Edward J. Brenner, Commissioner, Patent Office; Hon. Robert S. McNamara, Secretary of Defense—Designee, Hon. Paul R. Ignatius, Assistant Secretary of Defense; Administrator of the Small Business Administration—Designee, Mr. Eugene J. Davidson; Dr. Leland J. Haworth, Director, National Science Foundation—Designee, Mr. William J. Hoff.

The Secretary of State, Dean Rusk—Designee, Philip H. Trezise, Deputy Assistant Secretary of State for Economic Affairs; Dr. Donald F. Hornig, Office of Science and Technology—Designee, Mr. David Beckler, Office of Science and Technology, may sit with the Commission as observers.

### ***International Activity***

The Office of International Patent and Trademark Affairs was established for the purpose of (1) consolidating and increasing efforts towards international cooperation in the patent and trademark fields, and (2) studying and making recommendations concerning the U.S. position on and participation in existing and proposed multilateral patent and trademark agreements. In furthering this purpose, Commissioner Brenner and staff representatives have attended a series of international meetings in Geneva on several different occasions sponsored by the United International Bureau for the Protection of Intellectual Property (BIRPI) to discuss the international classification of industrial designs, the study of a model law for developing nations, proposed revisions to the Paris Convention, including inventors and authors certificates, reorganization of BIRPI, and the collection of industrial property statistics with the view of establishing an index of related patents issuing in different countries.

The fourth annual meeting of the International Cooperation in Information Retrieval Among Examining Patent Offices (ICIREPAT) was held in Washington, D.C. During this meeting 15 member countries approved the use of five (5) operating information retrieval systems including (1) the Steroid system of the United States; (2) the Alloy system of the United Kingdom; (3) the Lubricants system of the Netherlands—I.I.B. Offices; (4) the Analog Digital Convertor system of the Netherlands; and (5) the Nuclear Reactor system of Japan.

In addition, representatives of the Office have observed the international meetings of the members of the Nice Agreement for the International Classification of Goods and Services to which trademarks are applied. Also a number of foreign trademark offices were visited to discuss their operations and procedures under the Madrid Agreement on trademarks. Closely related to these visits and attendance at international meetings is a current study for the purpose of determining the advisability and feasibility of adherence to the Madrid Agreement.

Under active consideration is a plan for the exchange of search results in patent applications with a number of foreign countries. The plan provides for the United States to furnish to foreign countries with whom an agreement is made, a list of references cited in the examination of applications originating in the United States and subsequently filed in the foreign country. Similar treatment would be accorded the United States by the participating foreign countries. Such a program would, hopefully, ease the search burden on the countries involved and might aid U.S. business interests abroad by speeding the examination of their foreign filed cases. A study is being made also to see if it is possible to harmonize domestic and foreign specification requirements with a view to facilitating the examination of applications filed in more than one country.

### ***Research and Development***

At the beginning of fiscal year 1965 a comprehensive study of the research and development program was initiated. The findings of this study were reviewed by Assistant Secretary Hollomon, Commissioner Brenner and a group of outside consultants consisting of Mr. Howard King Nason of Monsanto Research Corporation, Mr. Bernard David Holbrook of Bell Telephone Labs, Dr. Arthur Walter Tyler of Tyco, Inc., and Mr. Francis Kimber McCune of General Electric Company.

As a result of this review, and in consideration of other government supported and funded projects in the field of Information Retrieval, it was deemed advisable to direct the Research and Development effort of the Patent Office to the creation of mechanized retrieval systems that offered a promise of relatively early assistance to the Examining Corps and which were compatible with the principal emphasis placed on mechanized retrieval systems in other examining patent offices. The emphasis of the Research and Development program was, therefore, directed away from the longer range research aspects and toward the creation of systems, in cooperation with other patent offices through ICIREPAT, which would largely employ presently available and implementable techniques.

As a result of this redirection of the Research and Development activities, and in keeping with the recommendations of the non-Patent Office experts who reviewed the program, part of the budget, originally planned for Research and Development in Information Retrieval has been re-programmed to enable the Office to institute a systems analysis study of all aspects of the Office.

### ***Office of the Solicitor***

This year was distinguished by the granting by the Supreme Court of petitions for writs of certiorari in two cases involving Patent Office decisions. One, the Manson case (142 U.S.P.Q. 35), in which the Court of Customs and Patent Appeals reversing the Office held that a process which produces a

useless product is patentable. The other, the decision of the Court of Appeals for the District of Columbia Circuit in *Hazeltine Research Inc., et al. v. Ladd*, 340 F. 2d 786, affirming the Office position that "copending patent" is prior art within the meaning of 35 U.S.C. 103.

The petition in the Manson case is the only petition which the Supreme Court has ever granted for review of a patent or trademark case decided by the Court of Customs and Patent Appeals.

Four hundred and eleven applicants took the examination for registration to practice before the Patent Office resulting in the registration of 117 patent attorneys and 100 patent agents. At the end of the fiscal year approximately 7,000 attorneys and 1,380 agents appeared on the registers of patent attorneys and patent agents.

### **Legislation**

By the end of fiscal year 1965 it appeared that Congress would pass and the President would sign H.R. 4185 into law and thereby increase certain fees payable to the Commissioner of Patents in connection with filing and examination of applications for patents, issuance of patents, and registration of trademarks. The new issue fees would be applicable to patents for which notices of allowances were sent out of the Patent Office on or after the effective date of the law. The new filing fees would be applicable only to applications filed after that date. Other new fees generally would apply if they became due after the effective date of any law enacted. A notice describing the schedule of new fees with an explanation of the method of determining them would be published in the Official Gazette.

There were pending before the Congress at the end of fiscal year 1965 a number of legislative proposals of special interest to the Patent Office, viz. a bill S. 1758, to amend the Administrative Procedure Act, establishing the right of any member of the bar of the highest court of a State or possession to practice before any Federal agency including the Patent Office. Other requirements which may presently be imposed by an agency would be eliminated.

S. 1971, pending before the Subcommittee on Patents, Trademarks, and Copyrights of the Senate Committee on the Judiciary would make the question of obviousness of an invention under section 103 of title 35, U.S. Code, a matter solely for judicial determination after the grant of a patent, and not a matter for determination by the Commissioner of Patents before the grant of a patent.

Final regulations were promulgated under authority of Public Law 88-292 (March 26, 1964) on December 29, 1964, by the Commissioner of Patents designating instances when a written declaration might be used in lieu of oaths in support of certain documents filed in the prosecution of patent applications. A preliminary draft of regulations for the same purpose in

the field of trademarks was published in the Federal Register on May 15, 1965.

#### *Academy*

Approximately 160 Senior Examiners and management personnel from the Examining Corps and the Office of Patent Classification attended a series of Patent Law Seminars, totaling 36 hours, developed and presented under the direction of the Office of Examining Control. The seminars were concerned with current examining practices and procedures and the effects of recent court decisions on existing practices and procedures. The major objectives of the seminar program were to:

- a. Promote uniformity of practice throughout the Examining Corps.
- b. Resolve differences of opinion and differences in interpretation in matters relating to practices and procedures.
- c. Ensure that all professional supervisory and management personnel in the Examining Corps were familiar with current practices and procedures and policies relating hereto.

Approximately 180 junior examiners completed the basic training program of 140 hours in the Patent Office Academy during fiscal year 1965.

#### *Work Measurement*

The Office of Planning and Program Evaluation completed a Measurability Study of the Patent Office and identified program areas for detailed work measurement studies and the construction of work standards. A comprehensive schedule was established for the accomplishment of these studies by the Management and Organization Division.

#### *Personnel*

Added emphasis has been given to the program of hiring engineers and scientists at the GS-9 and GS-11 levels who have had no patent experience in hopes of minimizing the effects of the continuing turnover of junior examiners.

The Patent Aid program to hire exceptionally well qualified high school graduates through nationwide competitive examinations is continuing and the Patent Office is giving the aids an opportunity to get college training in engineering courses while in this program. Some thought is being given to extending the programs to candidates with other levels of educational attainment, such as students in cooperative University-Government agency programs and Junior College graduates with basic science training.

The first phase of a comprehensive Career Development program for the Patent Office professional patent examiners and nonexamining personnel neared completion and was declared operational during fiscal year 1965.

#### *General Services*

Improvements in service and cost reduction during fiscal year 1965 have been made by (1) the utilization of mechanized systems to reduce the time

necessary to furnish patent and trademark printed copies, (2) the introduction of a film-chip system for the reproduction of copies of exhausted patents in the lower-demand category, (3) a new printing contract covering the initial printing of patents at a lower cost per copy, (4) the utilization of a less expensive paper for the printing of patent specifications at no sacrifice in the quality of the copy furnished, (5) furnishing copies of references as they are cited by examiners, (6) introducing statistical sampling techniques for the identification and reprinting of specific patent numbers which have a high rate of demand, and (7) the introduction of coin-operated copying devices in public search areas.

Two major organization and procedure studies were initiated and completed in fiscal year 1965. Each had as its objective the attainment of efficient, economical and effective service to the Patent Office and to the public. The patent copy sales function has been reorganized to be more responsive to customer demand. Many manual operations have been realined and grouped for better utilization of mechanical processing techniques. The recordation of assignment documents has received an extensive examination. The results of this study will be fully realized in the coming fiscal year.

### **OPERATING COST AND INCOME**

The Patent Office appropriation for fiscal year 1965 was \$31,495,000, which amount was comprised of the regular appropriation of \$30,500,000 and a supplemental appropriation of \$995,000 for pay act costs. A transfer of \$6,000 was received from General Administration, Department of Commerce for financing certain centralized services. New obligational authority for the year was thus \$31,501,000.

Program costs for this period were \$31,257,835, and with the addition of \$175,248 net obligations incurred for costs of other years the total amount obligated during fiscal 1965 was \$31,433,083, or 99.8 percent of new obligational authority.

Compensation for an average of 2,484 employees accounted for 74 percent of total operating expenses; related costs of employee life insurance, health benefits, retirement, Federal Insurance Contribution Act taxes, awards, and Employees Compensation Fund payments for 6 percent; printing and reproduction for 15 percent; and all other operating costs for 5 percent.

During the year the Office received \$9,271,858 in fees and deposits from all sources. Refund of \$61,944 and a net increase of \$6,053 in the deposit fund for unapplied receipts resulted in a net income of \$9,203,861. This exceeded by \$810,519 the previous record-high amount of \$8,393,342 for fiscal 1963, and was equivalent to about 30 percent of operating costs.

## STATISTICAL DATA

Following are tables depicting various quantitative aspects of Patent Office Operations:

### PATENT EXAMINING OPERATION

#### Inventory of Pending Patent and Design Applications As of June 30, 1965

Status	Patents incl. plants and reissues	Designs
<b>Under examination:</b>		
Awaiting:		
Action by examiners.....	147,457	1,827
Response by applicant.....	40,662	3,203
